Review of armainsurancehv.com.au

Generated on May 18, 2020

Introduction

This report provides a review of the key factors that influence the SEO and usability of your website.

The homepage rank is a grade on a 100-point scale that represents your Internet Marketing Effectiveness. The algorithm is based on 70 criteria including search engine data, website structure, site performance and others. A rank lower than 40 means that there are a lot of areas to improve. A rank above 70 is a good mark and means that your website is probably well optimized.

Internal pages are ranked on a scale of A+ through E and are based on an analysis of nearly 30 criteria.

Our reports provide actionable advice to improve a site's business objectives.

Please contact us for more information.

	 Low impact

Content

! Title Tag

ARMA Insurance Hunter Valley - Insurance Broker Newcastle, Maitland & Singleton

Length: 79 character(s) (594 pixels)

HTML [title tags](#) appear in browser tabs, bookmarks and in search results.

It looks like your title tag is a little outside the ideal length. Since they are [one of the most important on-page SEO elements](#) you should make your title tags between 20 and 70 characters including spaces (200 - 569 pixels). Make sure each page has a unique title and use your most important keywords. For internal pages start your title tags with your most important keyword(s).

! Meta Description

Insurance Broker Newcastle, Maitland, Singleton, Hunter Valley. Offering over 60 insurance products for personal, commercial and farm insurance. Call 4932 4444 today.

Length: 166 character(s) (978 pixels)

Meta descriptions allow you to influence how your web pages are described and displayed in search results. A good description acts as a potential organic advertisement and encourages the viewer to click through to your site.

Keep it short and to the point; [the ideal meta description](#) should contain between 70 and 160 characters - spaces included (600 - 940 pixels).

Ensure that each of your web pages have a unique, straightforward meta description that contains [most important keywords](#). These keywords are especially important because they appear in bold when they match the user's search query (See the Google Preview below).

Check your Google Search Console (Search Appearance > HTML Improvements) for any warning messages to identify meta descriptions that are too long/short or duplicated across more than one page.

Mobile Version

<https://armainsurancehv.com.au>

ARMA Insurance Hunter Valley - Insurance Broker Newcastle, ...

Insurance Broker Newcastle, Maitland, Singleton, Hunter Valley. Offering over 60 insurance products for personal, commerci...

This is a representation of what your title tag and meta description will look like in Google search results for both mobile and desktop users. Searchers on mobile devices will also see your site's favicon displayed next to the page's URL or domain.

Search engines may create their own titles and descriptions if they are missing, poorly written and/or not relevant to the content on the page and cut short if they go over the character limit. So it's important to be clear, concise and within the suggested character limit.

Check your title tag and meta description to make sure they are clear, concise, within the suggested character limit and that they convey the right message to encourage the viewer to click through to your site.

Headings

	<H1>	<H2>	<H3>	<H4>	<H5>
4	4	8	8	0	
	<H1> ARMA INSURANCE BROKERS				
	<H1> OUR SERVICES				
	<H1> GET YOUR FREE QUOTE TODAY				
	<H1> SOME FEEDBACK FROM OUR HAPPY CLIENTS				
	<H2> NEWCASTLE, MAITLAND, SINGLETON				

and **19** more.

Great, your website is structured using HTML headings (<H1> to <H6>).

Use your keywords in the headings and make sure the first level (<H1>) includes your most important keywords. Never duplicate your title tag content in your header tag.

While it is important to ensure every page has an <H1> tag, only include more than one per page if you're using **HTML5**. Instead, use multiple <H2> - <H6> tags.

Content Analysis

This data represents the words and phrases that your page appears to be optimized around. We use what's called "[natural language processing](#)" (NLP), which is a form of artificial intelligence that allows computers to read human language, to do this analysis.

The numbers next to each word or phrase represents how often we detected them and their variants on the page.

Are these the keywords you want to target for your page? If so, great! Track your site's rankings in Google search results using [WooRank's Keyword Tool](#).

If these keywords aren't relevant to your page, consider updating your content to [optimize it for your target keywords](#).

Alt Attribute

We found **21** images on this web page.

3 ALT attributes are missing.

[data:image/svg+xml,%3Csvg%20xmlns%3D%22http%3A%2F%...](#)

[data:image/svg+xml,%3Csvg%20width%3D%2224px%22%20h...](#)

[data:image/svg+xml,%3Csvg%20width%3D%2240px%22%20h...](#)

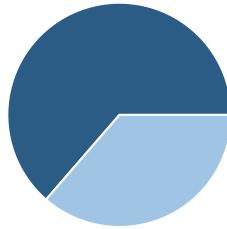

[Alternative text](#) allows you to add a description to an image. Since search engine crawlers cannot see images, they rely on alternative text attributes to determine relevance to a search query. Alternative text also helps makes an image more likely to appear in a Google image search and is used by screen readers to provide context for visually impaired users.

It looks like you're missing alternative text for 3 images on [armainsurancehv.com.au](#). Check the images on your website to make sure accurate and relevant alternative text is specified for each image on the page.

Try to keep your alternative text to a simple, one-sentence description of what's in the image.

In-Page Links

We found a total of 33 link(s) including 1 link(s) to files

- Internal Links (64%)
- External Links: Follow (36%)
- External Links: NoFollow (0%)

Anchor	Type	Follow
i.fontawesome-icon.fb-ic...	External Links	Follow
No Anchor Text	External Links	Follow
Terms of Use	External Links	Follow
Report a map error	External Links	Follow
No Anchor Text	External Links	Follow

and **28** more.

Links pass value from one page to another. This value is called 'link juice'.

A page's link juice is split between all the links on that page so lots of unnecessary links on a page will dilute the value attributed to each link. There's no exact number of links to include on a page but best practice is to keep it under 200.

Using the [Nofollow](#) attribute in your links prevents some link juice, but these links are still taken into account when calculating the value that is passed through each link, so using lots of NoFollow links can still dilute PageRank.

Check your site's internal linking using [Site Crawl](#).

Language

Declared: English

Detected: English

Great, your declared language matches the language detected on the page.

Make sure your declared language is the same as the [language detected by Google](#).

[Tips](#) for multilingual websites:

- Define the [language](#) of the content in each page's HTML code.
- Specify the language code in the URL as well (e.g., "mywebsite.com/fr/mycontent.html").
- Use [hreflang tags](#) to specify language and country for Google, and the "[content-language](#)" meta tag to specify the language and country for Bing.

Indexing

URL Resolve

Great, a redirect is in place to redirect traffic from your non-preferred domain.

All versions of your page point to the same URL.

URL	Resolved URL
http://armainsurancehv.com.au/	https://armainsurancehv.com.au/
http://www.armainsurancehv.com.au/	https://armainsurancehv.com.au/
https://armainsurancehv.com.au/	https://armainsurancehv.com.au/
https://www.armainsurancehv.com.au/	https://armainsurancehv.com.au/

Search engines see www.armainsurancehv.com.au and armainsurancehv.com.au as different websites. This means they could see a large amount of [duplicate content](#), which they don't like.

Fortunately your website redirects www.armainsurancehv.com.au and armainsurancehv.com.au to the same site.

Robots.txt

<https://armainsurancehv.com.au/robots.txt>

A [robots.txt file](#) allows you to restrict the access of search engine crawlers to prevent them from accessing specific pages or directories. They also point the web crawler to your page's XML sitemap file.

Your site currently has a robots.txt file. You can use Google Search Console's Robots.txt Tester to submit and test your robots.txt file and to make sure Googlebot isn't crawling any restricted files.

See the pages you've disallowed with your robots.txt file with [Site Crawl](#).

⚠ XML Sitemap

We found a sitemap at:

https://armainsurancehv.com.au/sitemap_index.xml

It is recommended to add it to your robots.txt file.

While we were able to find an [XML sitemap](#) for armainsurancehv.com.au there was no reference to it in your robots.txt file.

Specifying the location of your sitemap in your robots.txt file ensures that search engines and other crawlers find and access it easily each time they access your website. Learn more about [adding your XML sitemap to your robots.txt file](#).

Make sure XML sitemaps only include the pages you want search engines to crawl, so leave out any that have been blocked in a robots.txt file. Avoid using any URLs that cause redirects or error codes and be consistent in using your preferred URLs (with or without www.), correct protocols (http vs. https) and trailing slashes.

Submit XML sitemaps to both [Google Search Console](#) and [Bing Webmaster Tools](#).

✓ Sitemaps Validity

We found 1 sitemap(s) listing 8 URL(s).

- ✓ All sitemaps are within the file size limit
- ✓ All sitemaps are within the URL count limit
- ✓ All sitemaps have a valid structure
- ✓ All sitemaps are accessible
- ✓ The sitemaps in your robots.txt file use a valid URL format

Great! Your sitemaps seem to be valid

To learn more about what a valid sitemap should look like check out our guide about [XML Sitemaps](#) or submit it through [Google Search Console](#).

⌚ URL Parameters

Good, the URLs look clean.

URL parameters are used to track user behaviors on site (session IDs), traffic sources (referrer IDs) or to give users control over the content on the page (sorting and filtering). The issue with URL parameters is that Google sees each unique parameter value as a new URL hosting the same thing - meaning you could have a [duplicate content](#) problem. Sometimes, it's able to [recognize these URLs](#) and group them together. It then algorithmically decides which URL is the best representation of the group and uses it to consolidate ranking signals and display in search results. You can help Google recognize the best URL by using the rel="canonical" tag.

Use the [URL Parameters Tool](#) in Google Search Console to tell Google how your URL parameters affect page content and how to crawl URLs with parameters. Use this tool very carefully - you can easily prevent Google from crawling pages you want indexed through overly restrictive crawling settings, especially if you have URLs with [multiple parameters](#).

Check the On-Page section of [Site Crawl](#) to identify any duplicate content issues.

Hreflang Tags

No hreflang tags were found on this page

The [hreflang tag](#) is an HTML tag that tells search engines which languages and (optionally) countries a page's content is relevant for. Hreflang tags also tell search engines where to find the relevant content in alternate languages.

If your website targets users all around the world, using hreflang tags will help make sure the right content is being served to the right users.

The value of the hreflang attribute identifies the language (in [ISO 639-1](#) format) and optionally a region in [ISO 3166-1 Alpha 2](#) format of an alternate URL.

Use [WooRank's Site Crawl](#) to perform a thorough check on hreflang validity across a website.

Broken links

No broken links were found on this web page

[Broken links](#) send users to non-existent web pages. They hurt a site's usability and reputation, which impacts SEO.

Fortunately your page doesn't contain any broken links.

Be proactive in checking your pages to make sure they don't have any broken links.

See the HTTP status for potentially thousands of links using [Site Crawl](#).

Underscores in the URLs

Great, you are not using underscores (these_are_underscores) in your URLs.

Great, you aren't using [underscores](#) (these_are_underscores) in your URLs.

Google sees hyphens as word separators while underscores aren't recognized. So the search engine sees www.example.com/green_dress as www.example.com/greendress. The bots will have a hard time determining this URL's relevance to a keyword.

We've discovered 777 pages on armainsurancehv.com.au.

Discovered pages do not impact your ranking but this is very handy information to have to make sure that your site's pages are being indexed correctly.

A low number can indicate that bots are unable to discover your pages, which is commonly caused by bad site architecture and poor internal linking. Or you've unknowingly prevented bots and search engines from crawling and indexing your pages. An unusually high number could be an indication of duplicate content due to URL parameters.

Make sure your website's [XML sitemap](#) is present and that you've submitted it to the major search engines. [Building backlinks](#) to your website's internal pages will also help bots to discover, [crawl and index](#) them, while building authority to help them rank in search results at the same time.

Check Index Status and Crawl Errors in [Google Search Console](#) to track the status of your crawled/indexed pages.

If the number shown here doesn't sound right, we recommend to use [WooRank's Site Crawl](#) analysis to find out why.

If you use parameters in your URL like session IDs or sorting and filtering, use the [rel="canonical"](#) tag to tell search engines which version of those pages is the original.

Mobile

Mobile Friendliness

Very Good

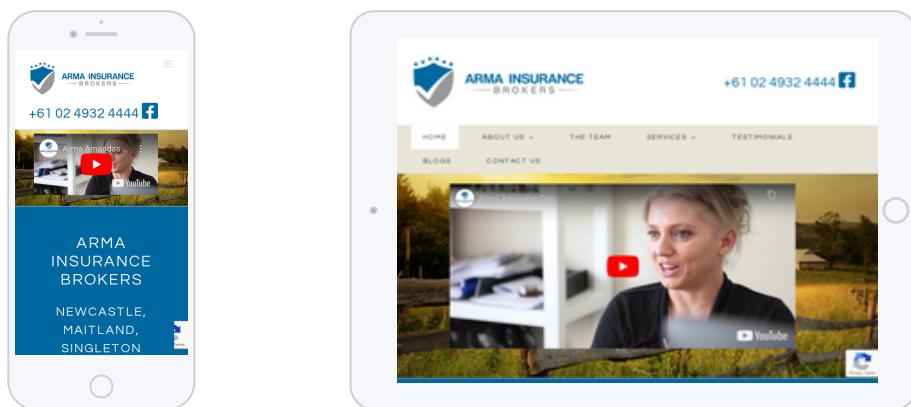

This web page is super optimized for Mobile Visitors

Mobile friendly pages make it easy for users to complete objectives and common tasks and use a design or template that is consistent across all devices (uses responsive web design).

Your site is well configured for mobile users.

Mobile Rendering

This is how your website appears when displayed on different mobile devices.

With more than half of all Google search queries originating on a mobile device, it is important to make sure your mobile site is optimized for these users.

Tap Targets

Perfect, your page's tap targets are big enough and have enough space between them.

Great, your links and buttons are big enough to be easily tapped and spaced enough so that a user's finger pressing on one tap target does not inadvertently touch another tap target.

Plugins

Perfect, no plugin content detected.

Great, your website does not embed any special types of web content, such as [Flash](#), [Silverlight](#) or [Java](#), so your content can be accessed on all devices.

 **Font Size Legibility** Perfect, this web page's text is legible on mobile devices.

At least 60% of your page's font size is 12 pixels or greater.

 **Mobile Viewport**  Great, a configured viewport is present.
  The content fits within the specified viewport size.

Great, the [viewport](#) is well configured.

Keep in mind that since the width (in CSS pixels) of the viewport may vary, your page content should not solely rely on a particular viewport width to render well. Consider these additional tips:

- Avoid setting large absolute CSS widths for page elements.
- If necessary, [CSS media queries](#) can be used to apply different styling depending on screen size.
- Ideally, serve responsively-sized images.

 **Mobile Frameworks** No mobile frameworks have been detected.

Mobile or [responsive frameworks](#) are an important part of website optimization as they assist developers in creating applications which are applicable to multiple devices.

 **AMP** We didn't find AMP on your page.

AMP is an open-source library that provides a straightforward way to create web pages that are compelling, smooth, and load near instantaneously for users.

Check your AMP markup with the [AMP validator](#).

Structured Data

Schema.org

WebPage 1

WebSite 1

Great, we detected Schema.org items on your webpage.

Schema.org is a set of vocabularies used to add meaning to the information on a webpage in a way that is readable by machines (Google).

Schema.org includes attributes for entities, relationships between entities and actions.

These vocabularies can be added to a page using many different encodings, including RDFa, Microdata and JSON-LD.

Learn more in [Google's intro to structured data](#).

Open Graph Protocol

- ✖ Multiple 'og:type' values specified
- ✖ Property 'og:image' should be at least 200x200px

✖	ARMAINSURANCEHV.COM.AU
	<ul style="list-style-type: none">✖ Multiple 'og:title' values specified✖ Multiple 'og:description' values specified

Tag

og:image	https://armainsurancehv.com.au/wp-content/uploads/2017/03/ARMA_logo_450_cropped.png
og:url	https://armainsurancehv.com.au/
og:locale	en_US
og:site_name	ARMA Insurance Hunter Valley - Insurance Broker Newcastle, Maitland & Singleton

We detected open graph tags on your webpage, but there are some errors that should be fixed.

Facebook developed the [Open Graph protocol](#) to enable the integration of any web page with its social media platform. Other social media platforms have also adopted the protocol, allowing you to control how your web pages are presented when shared across social media.

Check out Facebook's [Guide to Sharing for Webmasters](#) to learn how to add Open Graph tags.

Use the [Sharing Debugger](#) to check what information appears when shared on Facebook and the [Twitter Cards Validator](#) to do the same for Twitter.

Microformats

h-entry 1

Designed for humans first and machines second, [microformats](#) use code (HTML/XHTML tags) originally intended for other purposes to add context to the content on a webpage. This helps machines (like Google!) to understand certain information (contact information, geographic coordinates, calendar events, etc.) intended for humans.

Security

Email Privacy

Warning! At least one email address has been found in plain text.

We don't recommend adding plain text/linked email addresses to your webpages, as malicious bots scrape the web in search of email addresses to spam. Instead, consider using a contact form.

SSL Secure

Great, your website is SSL secured (HTTPS).

- Your website's URLs redirect to HTTPS pages.
- Your headers are not properly set up to use [HSTS](#).
- Renew your SSL certificate now, it expires in 16 days.
- The certificate issuer is cPanel, Inc..

Modern websites tend to be SSL secured (HTTPS) as it provides an extra security layer while logging in to your Web Service. In 2014, [Google announced](#) that an HTTPS (vs HTTP) website would receive an extra boost in their ranking.

While switching to HTTPS, make sure your site remains optimized and see to it that your website will still run quickly. Follow these best practices for a smooth transition:

- Use a serious issuer to purchase your SSL certificate
- Redirect all of your HTTP pages to the HTTPS version of your website
- Use [HTTP Strict Transport Security](#) (HSTS) in your headers
- Renew your SSL certificate every year, before it expires
- Make sure that all of your content (CSS, etc.) is linked to HTTPS
- Update your XML sitemap to ensure the URLs include HTTPS and update the robots.txt file to reference this version
- Register the HTTPS website in Google & Bing Search Console/Webmaster Tools

Performance

Asset Minification

Perfect, all your assets are minified.

Great! We didn't find unminified assets on your web page.

To learn more on how to minification helps a website, read our [guide to minification](#).

Asset Compression

Perfect, all your assets are compressed.

Great! We didn't find uncompressed assets on your web page.

[Compressing assets](#) reduces the amount of time it takes a user's browser to download files from your server. Enabling compression is an important part of reducing the amount of time it takes your website to load.

Asset Cacheability

Perfect, all your assets are cached.

Great! We didn't find uncached assets on your web page.

[Enabling caching](#) for your website makes your site load faster for repeat visitors.

To learn more on how to make your website faster, check out these [tips to decrease page load time](#).

Technologies

Server IP

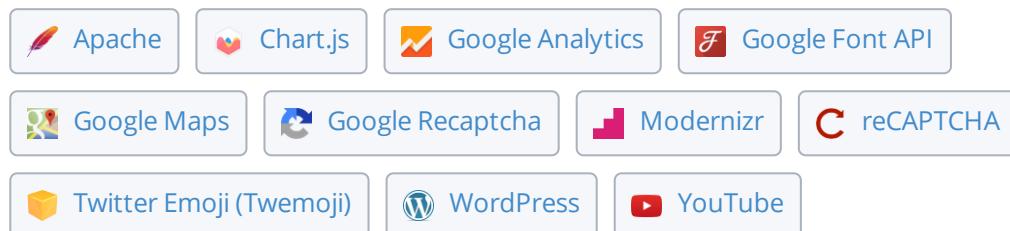

182.160.153.35

Server location: Narre Warren

Your server's IP address [has little impact](#) on your SEO. Nevertheless, try to host your website on a server which is geographically close to your visitors. Search engines take the geolocation of a server into account as well as the server speed.

Use [DNSstuff](#) for comprehensive reports on your server.

Technologies

Get to know the technologies used for your website. Some codes might slow down your website. Ask your webmaster to take a look at this.

Analytics

Google Analytics

Web analytics let you measure visitor activity on your website. You should have at least one analytics tool installed, but it can also be good to install a second in order to cross-check the data.

Popular Analytics Tools Include: [Google Analytics](#), [Quantcast™](#), [AdobeAnalytics™](#), [Piwik™](#), [chartbeat™](#), [Clicky™](#), [ClickTale™](#), etc.

Doctype

HTML5

The Doctype is used to instruct web browsers about the document type being used. For example, what version of HTML the page is written in.

Declaring a [doctype](#) helps web browsers to render content correctly.

✓ Encoding

Great, language/character encoding is specified: utf8

Specifying [language/character encoding](#) can prevent problems with the rendering of [special characters](#).

Branding

URL

armainsurancehv.com.au

Length: 15 character(s)

Keep your URLs short and clean and avoid long domain names when possible.

A descriptive URL is better recognized by search engines. A user should be able to look at the address bar and make an accurate guess about the content of the page before reaching it (e.g., <http://www.mysite.com/en/products>).

Keep in mind that URLs are also an important part of a comprehensive [SEO strategy](#). Use clean URLs to [make your site more "crawlable" by Google](#).

Resource: Search for a [good domain name](#). If no good names are available, consider a [second hand domain](#). To prevent brand theft, you might consider trademarking your domain name.

Favicon

Great, your website has a favicon.

Favicons are the small icons that represent a website, company and/or brand. They can be displayed (among other instances) in browser tabs or bookmarks. Google also displays favicons in a page's search snippet in mobile search results.

You can see how your site's favicon appears in search results in the Google Preview above.

Make sure your favicon is [consistent with your brand](#) to help improve visibility.

Custom 404 Page

Great, your website has a custom 404 error page.

Your server responded with the HTTP status code: [404](#)

[Custom 404 error pages](#) are an opportunity for you to reduce customer frustration and link to other pages on your site.

Domain

Backlinks

✖ Backlinks Score

Poor

The backlinks score is calculated by looking at a combination of link signals. This includes the overall number of backlinks together with the number of linking domains, as well as rating the overall quality of the backlinks pointing to a website. The quality assessment is based on the linking pages.

Use these WooRank guides to [audit your links](#), [evaluate their quality](#), [build new links](#) and [reclaim old links](#).

❗ Backlinks Counter

187

We've detected 187 backlinks pointing to your site.

Backlinks are links that point to your website from other websites. They are like letters of recommendation for your site.

Check out our guide on [how to build links for SEO](#). If your backlink counter is high, keep an eye on the [quality of the links](#) coming your way.

⌚ Referring Domains

13

This number tells you the number of domains linking back to your site. If you have lots of backlinks but a low backlink score, having a lot of links from low-quality social media or blogging platforms could be the cause.

Traffic

Traffic Estimations

Very Low

This shows your estimated traffic for armaininsurancehv.com.au compared to any competitors you have chosen. We use [Alexa](#) for this information.

Traffic Rank

Global rank too low to be calculated.

Local rank too low to be calculated.

A low rank means that your website gets a lot of visitors.

Your [Alexa Rank](#) is a good estimate of the worldwide traffic to armaininsurancehv.com.au, although it is not 100 percent accurate.

Reviewing the [most visited websites](#) by country can give you valuable insights.

Local

Local Directories

Add your [Google My Business profile](#) or [create one](#)

Add your [Yelp page](#) or [create one](#)

This is a list of the local directories where your business has been found. Take care of your listings in local directories; since maps are now an integral part of search results, your [Google My Business page](#) may have more visitors than your website!

It is important to make sure that your business details are correct in each directory where you are listed. Find the directories in your country ([USA](#), [UK](#) and [Canada](#)) and enhance your listings with pictures, video, schedules and as many customer reviews as possible.

Online Reviews

No local reviews found.

These are the latest reviews of your business that can be found in local directories. Surveys show that 90 percent of customers say buying decisions are influenced by [online reviews](#) so take the time to make a good impression and [gather positive feedback](#). Strategies for gaining reviews may differ by audience or business type; in general, consider asking for reviews, making it easy to send in feedback and having a prominent social presence.

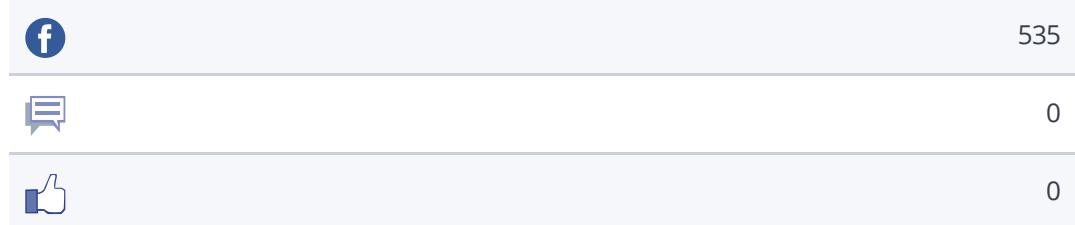

Social Profiles

Social Media Engagement

Your homepage is widely shared on Social Networks.

The impact of social media is huge for certain industries.

Learn how to further engage your social media audiences and create a consistent fan base. [Check these helpful tools](#) for managing your social media campaign.

Note: This data includes [engagements from like and share buttons on your site, or people copying and pasting your URLs directly into Facebook](#) from your website's URL. It does not count likes and shares from your branded Facebook page.

✖ Facebook Page

We found <https://www.facebook.com/Armaininsurance> on your webpage. If this is your account, add it to your structured data.

[Add your Facebook Page](#) or [create one](#)

We couldn't find a Facebook page for [armainsurancehv.com.au](#) defined in your structured data.

Facebook is a vital channel for any business' digital marketing. [Almost every Millennial](#) expects you to have a presence on Facebook.

Use [Facebook Insights](#) to measure and track your audience's engagement with your posts to get the most out of your social media efforts. Link your Facebook profile with [armainsurancehv.com.au](#) and [add a CTA](#) to really maximize your social media marketing efforts.

✖ Twitter Account

Not found

[Add your Twitter account](#) or [create one](#)

We couldn't find a Twitter account for armaininsurancehv.com.au defined in your structured data. Twitter, simply put, is huge: [67 million monthly American users](#) and 310 million people worldwide. Even better, there's a positive correlation between social media use and [education and household income](#). By not having a Twitter account, you're potentially missing out on a huge audience.

Create a Twitter account for your brand and link it with your website to prevent [brandjacking](#) and help make your social media marketing more effective. Here are a [few tips](#) to help create a Twitter promotion plan. Use [Twitter Dashboard and Analytics](#) to track and optimize your Twitter feed for the engagements that are most valuable to your marketing plan.

Instagram Account *Not found*

[Add your Instagram Account](#) or [create one](#)

We couldn't find an Instagram account for armaininsurancehv.com.au defined in your structured data.

There are over 800 million Instagram accounts active every month, and 500 million of those are active every single day. This means that when it comes to content, you've got about 800 million potential sets of eyes ready to enjoy your content.

If you do have an Instagram account for armaininsurancehv.com.au, check our article on [how to link your social medias](#).

LinkedIn Account

We found <https://www.linkedin.com/company/13576831/> on your webpage. If this is your account, add it to your structured data.

[Add your LinkedIn Account](#) or [create one](#)

We couldn't find a LinkedIn Account for armaininsurancehv.com.au defined in your structured data.

With [562 million users](#), LinkedIn is all about building [networks and connections](#). It's not only about who you know, but about who your connections know.

That's the real power of LinkedIn for business: the ability to tap into existing connections and grow your brand through word-of-mouth.

Having a LinkedIn Company Page helps people learn about your business and your brand.
